

Caden Chapman Design Document - Simple Clicker Game

For my final I wanted to create a simple clicker game for someone to do when they are bored without all the fancy inclusions you'd see from a clicker game. To create this, all I have on the project is a button to click to earn a score, and also, an upgrade button that can be used to increase the click score. The upgrade button continuously goes up the more you purchase it in order for you to reach a goal when using the clicker. There is no end, I just wanted something that could be used for somewhat forever, and continuously have an increasing score. It's not the most impressive clicker game, but it archives the goal of simplicity that I was going for.

Features Included:

1. Clicker button itself
2. The score that increases when you click
3. The upgrade button
4. Being able to purchase the upgrade button with your score
5. The increase in the amount of clicks you get when you click when getting an upgrade
6. Animations and general UI so the game is at least somewhat appealing
